TODO (student number)   TODO   TODO   6434657

Abstract—**TODO: Most important paragraph. Context (our question, the problem statement), content (here we go over what we did and what we found), conclusion (why/how it matters). Max 150 words.**

Index Terms—**TODO**

I. INTRODUCTION

TODO: Why does the paper matter? Set up gap in science/knowledge focusing down from a bigger problem to our smaller problem. Last paragraph should summarize our results to fill this gap. Here we can give context and background if we want than the abstract. We cannot give a conclusion, at most preview/tease the conclusion/results.

II. METHODS

TODO: our approach and subsections for why we use that approach.

III. RESULTS

TODO: This should be a sequence of statements each supported with some evidence and a conclusion. Each statement is a subsection, the first paragraph of a statement summarizes the overall approach to solving the problem stated in the introduction, explain essential features of existing methods we use and necessary background information. If we made a method ourselvers point it out clearly. Figures must be self contained (the legend and caption should have all the info for the figure).

IV. DISCUSSION

TODO: First we discuss how the gap from the introduction was filled by the report, the limitations of the approach, some future directions and perhaps an open problem we find. Afterwards Basically everything we put some time into but did not write out to a result can be put here and anything we wanted to do but did not can also be put here.

AI STATEMENT

TODO: If we used machine learning generative AI to do anything we put it here.
